

E P H E M E R I S.

OR, A

D I A R Y

{ ASTRONOMICAL,
ASTROLOGICAL,
METEOROLOGICAL, }

For the Year of our Lord, 1691.

Being the Third after

BISSEXTILE, or, LEAP YEAR.

Comprehending

- I. An E P H E M E R I S of the Planets Motions, Eclipses of the L U M I N A R I E S, Terms, and their Returns; with a Domifying Table, and a Table of the Planets Essential Dignities, after P T O L E M Y.
- II. An ENQUIRY ASTROLOGICAL, Whether the Planets ♀ and ☿ do not Stimulate turbulent humid Air, upon changing their Sign. Together with a DEMONSTRATION of the Nature and Influence of the P L E I A D E S, &c.

By J O H N G A D B U R Y,
Student in Physick and Astrologie.

Multi multa sciunt, sed nemo Omnia.

Licensed, September 27th, 1690. Rob. Midgeley.

L O N D O N, Printed by J. R. for the Company of
S T A T I O N E R S, 1691.

ADVERTISEMENTS.

THE Book mention'd the last year, call'd *The happy future State of England, &c.* has been lately publish'd under the Title of — *A Discourse of the Growth of England in Populouness and Trade; of the Numbers of the People, founded on Poll-Bills, and the Bishops Survey 1676. Of Publick Taxes, &c. with various Political Remarks and Calculations, relating to most parts of Christendom: The Present Clerical Revenue ascerted. With many Historical Matters about the Papacy, &c. of Excellent Use to all that are curiously Inquisitive into Matters of Church and State. Written by the Honourable Sir Peter Pett. And sold by W. Rogers at the Sun against St. Dunstan's Church in Fleet-street.*

* * There will shortly be published, *A Draught of the most Excellent Ship, called Britannia; much larger, and far better Engraven, than that of the Royal Sovereign: It being allowed by the best Judges, to be the most Glorious Ship in the known World. — The Places where, and the Price at which, the said most admirable Draught will be sold, shall be notified in the Gazette.*

* * *A Doctor of Physick, Eminent for the Cure of all sorts of Venereal Persons, still liveth in Great-Britain Knights-Street, near Doctors-Commons: Of whom any Person may have Advice; and (favente Deo) A Perfect Cure, let their Disease be of the longest Date, and with the worst of Symptoms. — His House is known by a Blew Ball over the Door.*

Of the Suns entring into the Four Cardinal Points, Anno 1691.

I. Of the SPRING.

This Active Quarter begins on *March 9th*, 18 hours 48 minutes P. M. at which time the Blustering Pleiades arise in the Horoscope and h is in ♊ unto them. 'Tis a Melancholly Position, and would produce Melancholly Effects, did not the \odot cast a benevolent \triangle unto him.

II. Of the SUMMER.

Summer commenceth on *June 11th* day, between 9 and 10 in the Morning, m rises in the East, the v separates from a ♊ and applies ad ♋ . It behoves us that we pray to God to defend us from all our Enemies, as well Publick as Private. h and v are in ♊ an odd position for an Aestival Figure.

III. Of the AUTUMNE.

The Autumne begins *September 13th*. about 1 a Clock, mar ♈ ascends in the East. The v separates a ♊ \odot , and applies ad ♋ , A noble commanding Position from II ♋ , Humane Signs. It is somewhat violent: Howbeit, we hope the Proverb of *Homo homini Demon*, will not alwayes be in request with Men.

IV. Of the WINTER.

Winter begins on *December 11th*. somewhat after 1 h. P. M. v Horoscopes, as at the Spring, but v therein renders this a less violent Season. Albeit, h and ♊ are in a platiue ♊ . Let *Englands* Enemies feel the Effects thereof.

Of the ECLIPSES 1591.

This Year affords us Two Eclipses, and both of the Sun.

The First will be on *February* the 18th, about 5 h. Morning. It happens in ♋ , 10 degrees, It will be Invisible to *England*.

The Second will happen on *August* the 13th. near 6 h. P. M. and will be visible to us, if the Air be clear. It happens in the first degree of ♋ .

m and ♋ are Esteemed Equinoctial.

Nota ♋

On the 25th day of *July*, h and ♊ make their last ♊ from m and ♋ for this time: And so the Watry and Earthy Trigon take their leave at present; and will soon be superceeded by the Airy and Fiery Triangle, as to their Influences. The Hostile Aspects of h ♊ do ever frustrate those of h ♋ for the time they are predominant.

A Perpetual TABLE of Break of Day, Twilight, Sun-rise, Sun-set, Length of Day and Night, &c. in the Latitude of *London*.

♎	D	♌	♈	♈	♈	♈	♈	♈
♏	N	♌	♈	♈	♈	♈	♈	♈
♐	D	♌	♈	♈	♈	♈	♈	♈
♑	N	♌	♈	♈	♈	♈	♈	♈
♒	D	♌	♈	♈	♈	♈	♈	♈
♓	N	♌	♈	♈	♈	♈	♈	♈

Note, A Planet in his House is said to enjoy 5 Fortitudes; In his Exaltation 4. In his Triplcity 3. In his Term 2. In his Decanate 1. And when a Planet is out of all those Dignities, he is said to be Perigine.

Note also, A Planet in his Detriment, (which is ever opposite to his House,) hath 5 Debilities. In his fall, (which is opposite to his Exaltation,) he suffers 4 Debilities. This Table needeth no further Explanation.

January, 1691.

Full Moon, ☉ 4 day, at 11 Morning.
 Last Quarter, ☾ 11 day, at 8 Morning.
 New Moon, ☿ 19 day, at 11 Morning.
 First Quarter, ☽ 27 day, at 6 Morning.

Romish Account.
 English Account.

Lunar Aspects.

Observations.

Exurgat Deus, &c. Let God arise,
 and let *Englands* Enemies be scatter'd.
 ♄ in ♊ would instil Atoms of Good
 into the minds of Men, if their Natu-
 ral Depravity, and thirst after Ill, do
 not oppose it.

Arch-Bishop *Laird*, Beheaded *Janua-*
ry 30th. 1644.

The Brutish Consequens Rebellion
 brings,
 Are Murthering Bishops, Sacrificing
 Kings.

King *Charles* the First Beheaded, *Ja-*
nuary 30th. day, 1648.

Ah Pious Prince! twas *Englands* Crime,
 not thine,
 Thus made thee change this Life, for
 that Divine.

February hath XXVIII. Dayes.

Our busie *Muse* fain would be Nibling at
 The Prophets Place : So *Pleasant* is the Bait,
 That a Poor *Almanack* can scarce be writ,
 Without some strains of th' *Oracle* in it,
 And 'twere delight indeed, if it were so
 We could *Fates Laws* prevent, as well as know.

 Major erit glacies post festum quam fuit
 (ante.*

Had *Raguseus*, that *Venetian* Priest,
 which got so much Credit by Astrologie
 (and yet believed so little of it) but un-
 derstood the Reason of the Aires va-
 rious Changes, he would never have
 repudiated the Study of the Stars.

That most Excellent Prince, King
Charles the II. Departed this Life, Fe-
 bruary 6th. Anno 1685. T. A. &c.

God puts a Period to the Lives of Kings:
 Their Scene's the best, whose end
 (most Honour brings.

March hath XXXI Days.

But since we cannot reach that happiness,
 'Twere better for us that we live at ease,
 And pass such things: Submitting to his Will,
 That do's dispense to Mankind, Good, or Ill,
 At his appointed Time. which none can shun,
 But such, as for Assistance to him run.

March, 1691.

Full Moon, ☾ 4 day, at 8 Morning.
 Last Quarter, ☾ 11 day, at 6 Evening.
 New Moon, ● 19 day, at 8 Evening.
 First Quarter, ☾ 26 day, about Midnight.

Observations.

On March 9th. 1649 were Beheaded in the Pallace-Yard, Westminster, Duke Hamilton, Earl of Holland, and the Lord Capel. Their Crime, for adhering to King Charles the 1.

*Fibres pulvere, verno laro,
Grandia ferra, Canille, marm.*

Winters Dust, and Summers Rain,
Bring (*Camillas!*) store of Grain.

I wish this Year of 1691 may prove
an Instance of it.

April hath XXX Days.

No Aspect's fatal to the *Man*, whose Mind,
 To *Vertuous Actions* alwayes is inclin'd.
 The Syderal *Power* ceases, where *God's Law*
 Appears, our Rebel *Passions* for to Awe.
 The *Stars* do only Triumph in their *Sphere*,
 When Glorious *Sol* is pleas'd to disappear.

April, 1691.

Full Moon, ☾ 2 day. at 7 Evening.

Laft Quarter, ☾ 10 day, at 1 Afternoon.

New Moon, ● 18 day, at 8 Morning.

First Quarter, 25 day, at 5 Morning.

Legal Aspects.

Observations.

The Holy Feast of EASTER.

(Which commonly falls in this Moneth) is celebrated in Commemoration of our Blessed Saviours Resurrection, after he made himself (by suffering on the Cross) A Sacrifice for the Sins of all Mankind.

See more of the Feast of Easter in my Discourse thereof, and also in my Easter-Table, Printed by it self, and made serviceable for about 200 years yet to come; with a Salvo for Leap-years, and the Anticipation of the Equinoxes.

Mean men may propose, but it must be those in *Authority* that must stamp such Truths for a current Passage in the World.

May hath XXXI Days.

What boots it *Man* to talk of *Mighty Things*?
 Of *Battles*, *Sea-Fights*, *Conquests* of great *Kings*?
 Of *Plagues*? *Captivities*? of *Barren Years*?
 Which to but name, brings *Horror*, *Dread*, and *Fears*.
 Under all *Changes*, *Christians* are the same:
 Or else they are *dishonour* to that *Name*.

Observations.

Thomas Earl of Strafford, Beheaded,
 May 12, 1647.

This great Man was put to Death
 for Treason accumulative, which af-
 terwards by the then Powers, was or-
 der'd never to be drawn into Example.

King Charles the II. (with his two
 Royal Brothers) after a XII. years
 Exile, was triumphantly restored to
 the Exercise of his Royal Office.

B

June hath XXX. Days.

A perfect Science of the *Mundane Frame*
 God doth deny to *Mortals*, that they may
 Admire him only, and *Exalt* his Name
 Who first did separate the *Night* from *Day*.
Scimus ex parte, is enough for *Men*:
 Let us rest happy with that *blessing* then.

The most Illustrious *Leopoldus Ignatius*, the present Emperour of Germany, was born, S. N. 1640.

God preserve his Imperial Majesty, that he may continue a Scourge to the Insolent Turks, and be a Bulwark to Christendom, and a happy means to unite all divided Christians.

Oxford surrendered, on June 24. 1646. to Sir Thomas Fairfax.

Cities and Sieges, subject are to Fate.

July hath XXXI. Days.

A Wife *Man* rules the *Stars*, say some; and so
He may, no doubt, (while He is here below.)
If he to *Reason* alwayes lend an *Ear*,
He need not *Mars*, or *Saturns* Influence fear:
But, if He loose this *Hold* once, then they gain
The upper hand, and force him to complain.

Observations.

On the 19th day of this Month, the Dog-Days are said to begin with us, and continue to the 27th of *August*. The Dog-Star rising all that time with the Sun, whence Heat is generally predominant.

Many Learned Men are of Opinion, that the Dog-Star bites not in *England*. But our Weekly Bills of Mortality prove the contrary.

During the Canicular Reign, the River *Nilus* in *Agypt* overflows it's Banks, as though the Waters were led by that Star. *Vide*, the Learned *Browns* Vulgar Errors. *Fol*, 221.

August hath XXXI. Days.

Would we be free from *Troubles, Crosses, Cares,*
And quietly sit under our own *Vine?*

Enjoy the *Blessings* of our *Holy Prayers,*
And live at *ease?* (with *Butter, Oyl, and Wine?*)

Let's learn *Obedience* : That, our *Province* is;
And keeping *there,* we cannot *Act* amiss.

 New Moon ● 13 day, at 6 Evening.
 First Quarter ☾ 20 day, at 2 Afternoon.
 Full Moon, ● 28 day, at 5 Afternoon.

Lunar Aspects.

Observations.

On August the 14 day, Anno 1665,
 that valiant Sea-Commander, Captain
 Owen Cox, (with almost all his Men,
 was cast away in a storme, near Tar-
 mouth; and the Ship (the *Nathan Fri-*
gate) broke in to pieces.

See this Worthy Persons Nativity,
 and the Astrological Reasons of this
 Misfortune, as printed in my Ephemeris
 of Anno 1667, and also in my Astro-
 logical-Seaman.

September hath XXX. Days.

But, if we needs will *ramble* from our *Sphere*,
And into *Publick Matters* Penetrate,
No wonder if we are *Entangled* there;
And forc'd cry, *Had I wist?* When 'tis too late.
With his *Superiours* let none dare contend :
Jove's Thunder sends such *Madmen* to their end.

Observations.

The City of London burnt on September the 2, 3, 4 days in the Year, 1666.

In this unheard of lamentable Conflagration, there were not less than 90 Parish-Churches, with stately Halls, and Hospitals, and other Noble Edifices, consumed to Ashes: Besides, 13000 and upwards of Dwelling Houses.

Sic Patet Exemplis Oppida posse Mori.

By sad Example here we see,
 Cities may waste as well as we.

God defend this Glorious and New-built City, from any more such dreadful Fires to attend it, or to affright its many Numerous Inhabitants.

October hath XXXI. Days.

True Christians should true Gospel-Lessons learn;
Be meek and humble. Magistrates Obey.
So Truth from Error they shall soon discern,
And ever walk in the securest way.

He never goes amiss, nor needs to hide,
Who hath his Holy Saviour for his Guide.

Observations.

The slow pac'd Envious Planet *Saturn* now leaves *Scorpio*, where *Astrologers* think he hath bin Poysoning Humane Happinefs very long.

In that tedious Transit he concern'd himself with most of our *European* Countreys. (though *Scorpio* be a *Turkish* Sign,) and that to their heavy Detriment and Loss. — But, Blessed be the God of Stars, He comes no more there in almost XXX. years. Not, That I conclude the foresaid Kingdoms and Countreys will enjoy Tranquillity of so great a length. No Secula, or Age can afford us such a Blessing! But no more such Dreadful Doings shall we I hope, be tormented with, as when *Saturn* passes that sharp and nipping Sign. *Scorpio* is a Winter Dodecatemory; and is therefore Parent of Cloudy, Heavy *Winter-like* Actions

November hath XXX. Days.

The Stars, we know, have Influence and Power,
To Heal, and Hurt poor Mortals every Hour.
But true Religion soars above the Stars,
And, can command to Peace, the fiercest Warrs.
Shee's Empress of the Earth and Heavenly Spheres :
In following Her, we shall meet Calmer Years.

Observations.

King Charles the 1. of ever Blessed Memory, was born at Dunferling in Scotland, on November the 19. Day. Anno 1600.

This most Excellent and Pious Prince layd down his Life for the Church of England; for, rather than comply with their Enemies, by yielding to sign the Propositions sent to Him, when a Prisoner in the Isle of Wight; the Chief whereof were for Lessening the Lands, Honour, and Power of the Church, &c. He rather chose to submit himself A Sacrifice to them.

Vide, His Large and Learned Discourses with the London Ministers, and Mr. Henderson, &c. as they are Printed in his Admirable Essay FORTUNAE; and also the Propositions themselves.

December hath XXXI. Days.

Then let each Man with's Lot contented rest,
If he with *Quiet* would be fully blest.

Give to the Glorious *Starry-Host* their *Due*.

Yet not forget their *God* and *Maker* too.

For *Crimes* 'gainst *Him* produce all terene *Jays*.

But *Peace* with *Heaven* corrects our *Way-ward* *Starrs*.

Observations.

On the 21. day of December, King Charles the First was carryed Prisoner to Windsor, by the then prevailing Army, Anno 1648.

It was an Excellent, but sad Truth, which this Divine Prince observ'd upon his Confinement, viz. *There are but few steps between the PRISONS, and the GRAVES of Princes.* Which was most unhappily verified by his own fatal sufferings in a very short time after.

Oh! Dismal Act to remember.

Let us be humble towards God; Charitable to our Neighbours: Loyal and Dutiful to our Superiours. That, being the only way to invoke Divine Blessings. — *Grateful Hearts, will bring us Grateful and Peaceful Tears.*

When I consider the Heavens, the works of Thy Fingers, the Sun,
Moon, and Stars which Thou hast ordained; what is Man that Thou
art mindful of him!

An Enquiry Astrological, Whether the Planets upon changing their Signs, do naturally stimulate Rain, or humid Air? Attempted to be demonstrated from the Minor Planets, Mercury and Venus.

THAT there is a Difference or Distinction to be observed in the XII. *Dodecatemories*, or *Signs Zodiacal*, is apparent to any observing Man; sith every Sign enjoys its peculiar Quality and Nature, and that invariably, (as Sir C. Heydon, and others have proved) as to heat, driness, cold, moisture; and also in the different shapes, manners, actions, and passions of Humane kind, as born under them. And this is a truth so conspicuous, that none, who understand Astrology, will deny.

But, that the Planets changing from one Sign to another should work so certain a Mutation in the Air, as generally to stimulate Rain, or a humid Sky, is not so easily admitted. And yet *Hermes*, an Ancient Astrologer, in his Thirty third Aphorism, *Makes Saturn changing his Sign, Introductory of strange Sighes in the Air, fiery Impressions, &c.* To which Aphorism, I could say something by way of Confirmation from my own Experience; but that is none of my present Business. I therefore assume, and say, if a superior Planet, and of so slow a Motion, can have so great an Influence upon the Air in changing his Sign, as to afford satisfaction to the Ancients, sufficient for them to conclude it Aphoristically true; then surely much more may we presume it to hold in the inferior Planets, who are of a more velocious Motion, and by consequence more capable of irritating the Particles, or Atoms of the Air, from whence all change of Weather is made.

This is a point of Art, I never knew favour'd, scarce started by any of our Modern Astrologers. However, if I prove it true from a long Series of Observations, I hope is

may claim a little Credit with them, and be admitted (without much difficulty) a Place among other known Natural Verities, and not be rejected for its Novelty, or for the meanness of its unfortunate Discoverer.

My Observations shall then be (as I before mention'd) from the minor Planets, *Mercury* and *Venus*, changing from one Sign to another.

I will begin with the Planet *Mercury*; for, *Mercurius de se impetuosissimus omnino*. He is the most Turbulent, Violent, and Impetuous of all the Seven Planets; he is indeed more often felt than seen. And it is observed of him, that being situate so near the *Sun*, (never above 28 degrees distant) he makes naturally violent Weather, soon changing. 'Tis from this his Propinquity to the *Sun*, that *Ptolemy* terms him a drier; and for that he bears so close upon the Lunar Orb, he calls him a moistner, or raiser of Humidity. Which Characters, *Dr. Goad* hath notably improved in his *Astro-Meteorologica*.

Mercury is indeed an Hermaphrodite in his Nature, and can act both Parts to purpose, as well alone, as in Company, viz. by his single Transits, as by being in *Conjunction* or *Aspect* with other Stars. You may know more of him, and of his violent Actions and Performances, if you will read what Astrologers write of him, and his Significations, when he is Lord of an Eclipse, Conjunction, Solar Ingress, &c. It is not for nothing, that Astrologers have indulged him an equal share with *Saturn* (his Superior) in the Government of the Airy Triplicity. All Preferments do naturally presume a merit. And you will find *Mercury* to deserve it. For there is scarce a Hurricane, Tuffon, Tornado, Earthquake, violent hurtful Storm, Shipwrack, &c. but *Mercury* (as small a Planet as he is) hath a hand in the mischief.

My business therefore is to prove at present, that the Air is subject to Alteration, and mostly to Wet and Storms, upon our *Mercury* his going out of one Sign into another. For a Demonstration whereof, observe, I pray you, our Observations following, for twenty years together.

A Demonstration of the Planet Mercury, his changing the Air upon changing his Sign for Twenty Years together.

September 19. Cloudy, wet.

October 6, 26. Rain.

Let me be fairly and justly understood. When I plead for a change of Weather upon *Mercury's* passing from one Sign to another, I do it not to the prejudice of other Coelestial Causes, which may, and do sometimes happen near, or at the same time; when, to be sure, the Influence is enforc'd, as the Effect manifests. My design being only to remind the World of our Mercurial Influence in this particular; which seems neglected by most Astrologers, when as it ought to be accepted of, and allowed a place among the Causes of the Airs mutation. For, it is not upon every change of *Mercury* from one Sign to another, that we meet with Hail-storms; or yet Stormy-winds; as in *April* and *June*, Anno 1673 the Diary presents us withal. *Mercury's* Influence in his Transir, may be augmented or abated, as in that notable Instance;

Instance; and as in *May, Anno 1669.* and *June, Anno 1679.* where, as the Diary informs us, heat prevails. General Causes or Constitutions, must not be destroy'd for the sake of any one particular, tho never so cogent. That were to offend the highest Reason.

Nor do those Exceptions invalidate our Assertion, but rather affirm it; seeing, that upon *Mercury's* passing from one Sign to another, there is (for the most part) a fall of Moisture. I say again, therefore, That our Principle is rather strengthened than infirm'd; and that as fully, as is the *Sun's* Heat and Claritude, which qualities, tho the whole World know he possesseth, are yet nevertheless, at sometimes abated by the interposure of contrary Causes, but never wholly taken away.

Something also is to be allow'd to the Nature of the Months; but chiefly then, when opposite Causes prevail. Also, if at any time you find the Air to alter a day before or after *Mercury* changes his Sign, you should rather suppose, that the Planets place is untruly supputated, than rashly to charge the Rule with a failure. The Latitude of our Planet is in some respects, also to be consider'd; but seldom any material Difference arises thence, that having relation only to his rising and setting.

Also, it is obvious, That mists, and moist winds, snow, &c. do sometimes (tho not often) happen in the room of Wet; and those may reasonably be admitted to defend our Assertion, for the near Affinity they have to humid Air. A Cloudy-sky, and *Lunar-Halo's*, you will now and then, likewise, meet withal; and these are certain Messengers of an approaching Rain.

It is observable also, That the Rule holds in the Retrograde motion of *Mercury*; wherefore it must be granted, that his changing of his Sign, is in regard of us who inhabit the Earth, and not in respect of the Copernican System; for therein you must know, this nimble Planet rings the Changes much oftner than he doth in that of the Noble *Ptolemy's*.

It may further be remembred, That when our Planet changes his Sign twice in a Month, I then commonly mix the Character of both days together, the better to express

his Nature and Spirit in and for these performances; as also more fully to evince the matter in question to every unprejudiced understanding.

Having gone thorough *Mercury's* Changes for Twenty years together, in proof of our Axiom; I shall in the next place discover to you, what Musick *Venus* makes on the same Instrument, for the same number of years. For experience assure us. That her passing from one Sign to another, is of the like Efficacy in the Air, as that of her fellow-minor, *Mercury*—She is indeed a glorious, and (seeming) serene Planet, but yet can Rant and Ruffle it at some times, as well as her Mercurial Partner. *Albion* says, She is apt to produce Showers, and by her Potency can raise the Waters. The Learned *Goad* saith, *Venus* is a fair Star, but yet can Frown, Scowl, and Storm, and mask her self in dirty Clouds. She is, indeed, a bright and beautiful Planet, yet often found of a black and terrifying Influence. And this will appear very fully upon our Observations in her passing from one Sign to another.

See the Table of Venus for Twenty years.

Thus have I presented you with the Diary of *Venus* changing her Sign for Twenty years together. A *Token*, which the ingenious Meteorologer will thank me for, it being a Jewel not to be met with in every Book. I would also have given you the Tables of the *Sun*, and the three superior Planets to this purpose, but my allotted room is too narrow for it here. At some other time, if God spare my much envied Life, I may gratify the World therewith. But having a little spare Paper, I shall give my Reader a Demonstration of the Nature and Influence of the *Pleiades*, or Seven Stars, from the *Sun's* passing their opposite Point for seven years together. And that is commonly upon the 5th, 6th, 7th, 8th, days of *November*; where that great and glorious Body discovers such Turbulency, that it seems sufficient to make us to fear a Magazine were lodged in that stormy, violent Constellation.

But, by the way, I should first acquaint you, that the late Learned and Laborious Dr. Goad, *Anno 1660.* presented the World with a like Account of the Power of the *Pleiades*, for the years 1652, 53, 54, 55, 56, 57, 58. from a like

like passage of the *Sun*. An Observation of such excellent use, that I thought it worthy to be preserv'd to Posterity, and so Reprinted it in the second *Tome* of my *Ephemerides*, for the Service of such as have a mind to be Weather-wise. And so I come to my Seven years further Demonstration of the same illustrious Truth, *viz.*

Anno 1680. November.

- D.
 5. Rainy, cold, E.
 6. Cold, some rain, E.
 7. } Frost, cold, N. E. wind.
 8. }

Behold the Spirit of the *Pleiades*! Cold, rain, frost, and E. winds.

Anno 1681. November.

- D.
 5. Cold, rainy.
 6. } Close, cloudy, great
 7. } wind, E.
 8. }

No frost indeed, but cold rain, and great East-winds, well enough interpret the Nature of these turbulent Stars.

Anno 1682. November.

- D.
 5. Rainy, tempestuous day and night.
 6. Tempestuous winds, continue.
 7. } Frosty, cold Winds,
 8. } N. E.

Here again, we have the true Character of this turbulent Constellation.

Anno 1683. November.

- D.
 5. Cold, stormy day and night.
 6. } Cold, freezing.
 7. }
 8. Cloudy, mistle.

Doth it fail, or not? You see the *Pleiades* are invigorated with a stormy, frosty Soul, and often with wet Eyes.

Anno 1684. November.

- D.
 5. Rain, tempestuous day and night.
 6. Tempestuous winds, continue.
 7. } Frosty, cold Winds,
 8. } N. E.

Still you see we are haunted with the same turbulent Spirit. Those that incline most to Saducism, must allow of this.

Anno 1685. November.

- D.
 5. Mist, rain, m.
 6. Cold, much rain, m.
 7. Fog, frost, rainy night.
 8. Rain, tempestuous night.

The same Spirit appears again. If you will not believe me, turn to the Diary, and believe your own Eyes.

Anno 1686. November.

- D.
5. Misty, misle, wind, S. W.
6. Rain, P. great wind, S. W.
7. Rain, great winds, S. W.
8. Rain, M. cloudy, wind S.

I have done with my Instances. And what thinks my Reader now? Have not the *Pleades* a sharp, turbulent, humid Influence? 'Tis obvious beyond the reach of Objection. A Thesis so often proved hath no need to beg, since it hath a power to command the Question.

And, is it thus in the *Sun's* passing the *Opposition* of the *Pleades*? Then we may, perhaps, (would we but take the pains) find it little to differ in the Transits of *Venus*, *Mercury*, *Mars*, &c. over the same *Opposition*. I could say somewhat also to the *Sun's* passing the *Conjunction* and *Quartiles* of this blustering Constellation, but am limited here. Nay, a curious Observer (even in the most serene Weather and Seasons) will apprehend, that the *Moon* doth sensibly alter the Air when She comes to the later part of *Scorpio*, tho it be but by raising a Cloud, or a sudden gulf, or briefe of Wind.

Thus, Reader, I have this year furnish'd thee with a Novelty of far greater Truth and Value, than hundreds of trifling Predictions; tho thereby, for thy Amusement, I had kill'd some great Hero every Month, or fill'd thy Ears with divers dreadful Stories, of what sad Destiny attends the *French*, *Spaniard*, *Germans*, *Italians*, *Irish*, *Turk*, or *Transylvanians*; which nothing at all concerns either thee or me.

There is more excellent Satisfaction in being able to foretel a Storm of Rain, Hail, Thunder, or a Calm, than in a Million of vain pompous Presages. And yet, I know, that Astrology is not Tongue-ti'd in respect of the greatest Mundane Alterations, if it be rightly applied. *Their sound hath gone through the Earth.*

Some of our Annual Prophets predict at so extravagant a rate, as if they wanted *Helebore*, or had been brought up in *Lapland*; and make no more of Trafficking in the Lives and

and Honours of Princes, &c. than the *Laplanders* are said to do, in selling of Winds to cheated Travellers, or Navigators. To speak plainly, not one of forty of their delirious Promises or Menaces, ever come to pass. Several of them in their last years Prognosticks, have boldly presumed to kill the *French* King over and over, as one of them had done in former years; and yet (haughty Prince that he is!) He lives still, and is likely so to do, to verify their confident Predictions, *per* *Ανθρώπων*.

What do these Madmen think of themselves? Would they have us believe their Heads Periwigg'd with the Clouds? Or, that they have the Heavens and Stars in their Hands, and can command them to act and operate as they please? Let them leave their idle Canting-way, and talk of things within their Sphere, and prove themselves, if they can, as nearly affined to the Truth, as they have to Impudence and Lying. Do they believe their virulent Railing against Persons and Parties can justify their Ignorance? Or their Calumniating Crown'd Heads, or vituperating *Scorpio*, can render them Men of understanding? Such Astrology all sober Men disdain.

The spawning of such impious Notions for Art so frequently among us, hath, I confess, made me out of Love with Predictions, as being unwilling to vye it with those that care not what they write, so they make but a Noise and Bluster. Howbeit, I shall end such matter wherewith to adorn my *Ephemeris*, and for Entertainment of the modest Reader, while I continue this Annual Custom, that may really feed, and not affright his understanding. For it is a great Truth, (wherewith I'll conclude) That a Man may be an *Astrologer*, and yet neither a *Hectorian Witch*, *Delphian-Devil*, or *Atheistical-Conjurer*. And thus much shall suffice for this Solar Revolution of 1691.

God preserve the Kings most Excellent Majesty, His most Illustrious Queen Consort, our Gracious Queen Dowager, their Royal Highnesses the Princess and Prince of Denmark, and all the Royal Family. Bless the Lords, and Others of His Majesties most Honourable Privy-Council, the Nobility Gentry, Clergy, and Commonalty of this Realm; and bless us all with Peace, Plenty, Health, and Unity, this year and ever. Amen.
